

The use of power lines to carry digital information is going to cause havoc with amateur radio communications as well as other low frequency services. It is a fact, not a theory, that frequencies being proposed are going to be radiated due to the length of the transmission lines. The current RFI problems being experienced with stereo sets and broadcast reception due to plasma screens and computers clocked in the RF spectrum range is small compared to what is being proposed. If I am affected by this problem; I will join others in a class action suit against the FCC to force them to buy my amateur station for its replacement value as it will be of no use to me. This would include the tower and the antenna! This is not a threat, it is a reality and shows the depth of my convictions. The current head of the FCC is only interested in satisfying big business and has no concept of the Pandora's Box he is opening.
